

Q&A

CND™ PLEXIGEL

POSITIONING

QUESTION

1. Why **CND™ PLEXIGEL**?

ANSWER

CND™ PLEXIGEL is a versatile & convenient brush-in-a-bottle gel enhancement system, that provides strength, length and shape for 3+ weeks wear.
No Pots.
No Tubes.
No Mixing.
No Mess.
Use with **CND™** color to provide flawless nails!

2. What skill level is **CND™ PLEXIGEL** designed for?

CND™ PLEXIGEL is designed for every professional skill level.
THE PAINTER:
Shaper is a bridge to nail enhancing, with brush-on application.
THE GO-GETTER:
Provides speed and convenience by cutting rebalancing and filing time in half.
THE ARTISAN:
Elevates offering and enhances creativity with crystal clarity.

3. How is **CND™ PLEXIGEL** different than other types of enhancements?

CND™ provides enhancement options so the Nail Professional can customize the service to meet client needs based on nail type & lifestyle.

CND™ PLEXIGEL offers a convenient and versatile way to add shape and length to nails. **CND™ PLEXIGEL** is removable.

FILL IT – Save cracked nails with wearable patches
FIX IT – Repair broken nails
SHAPE IT – Plump and shape flat nails
BUILD IT – Create customizable length

CND™ BRISA™ Gel enhancements are tough and flexible, designed for hard, brittle nails that need light enhancing. This solvent-resistant oligomer must be filed off or grown out if removal is desired.

CND™ RETENTION+™ Liquid & Powder enhancements are the hardest and strongest enhancement option, perfect for soft, weak nails that require transformation. Liquid & Powder is removable.

FORMULA

1. Is **CND™ PLEXIGEL** soak-off or removable?

CND™ PLEXIGEL is removable. Removal time is approximately 20-30 minutes and can vary based on thickness of product. For efficiency, we recommend reducing the enhancement by 95% using an E-file before wrapping the nail with **CND™ OFFLY FAST™** Moisturizing Remover or acetone and a double cotton pad.

2. Is **CND™ PLEXIGEL** 12-Free?

CND™ PLEXIGEL was formulated without the following 12 ingredients: Formaldehyde, Toluene, DBP, Formaldehyde resin, Camphor, Xylene, Parabens, Ethyl Tosylamide, Triphenyl Phosphate (TPP), MIT, Animal Derived Ingredients & Gluten

3. Is **CND™ PLEXIGEL** Vegan?

CND™ PLEXIGEL is a vegan product formulated without animal derived ingredients.

CND™ PLEXIGEL

FORMULA (CONTINUED)

QUESTION

ANSWER

4. Is **CND™ PLEXIGEL** cruelty-free? **CND™ PLEXIGEL** was not tested on animals
5. Does **CND™ PLEXIGEL** contain monomers of HEMA and Di-HEMA? **CND™ PLEXIGEL** does contain HEMA at levels well within safe limits according to The Scientific Committee on Consumer Safety. The SCCS is of the opinion that HEMA and di-HEMA-TMHDC, when applied appropriately to the nail plate at concentrations of up to 35% and 99% respectively as part of an artificial nail modeling system, are not likely to pose a risk of sensitization, provided that their use is restricted to the nail plate only and contact with the adjacent skin is avoided.
6. Is **CND™ PLEXIGEL** low odor? Yes, although you may note a slight odor from the solvents contained in Bonder and Protector.
7. Does **CND™ PLEXIGEL** have similar science as **CND™ SHELLAC™** Wear Extender Base Coat? No. **CND™ SHELLAC™** Wear Extender Base Coat is designed to have cohesion with **CND™ SHELLAC™** Gel Polish. **CND™ PLEXIGEL** Bonder has cohesion with Shaper and Builder.
8. What is the difference between **CND™ PLEXIGEL** Shaper & Builder? **CND™ PLEXIGEL** Shaper is a crystal clear brush-on gel enhancement that plumps, smooths and shapes nails. Perfect for natural nail overlays and short length enhancing. Its crystal clear formula is also excellent for nail art! **CND™ PLEXIGEL** Builder is slightly thicker in viscosity and therefore easier to create longer enhancements that require more apex and architecture.

APPLICATION / USAGE

1. Should **CND™ PLEXIGEL** be shaken before use? It is not necessary to shake Shaper and Builder, however for Bonder and Protector Top Coat we recommend to gently roll the bottle to blend the ingredients as these do contain solvents.
2. Does the natural nail need to be filed prior to applying **CND™ PLEXIGEL**? **CND™ PLEXIGEL** is a gel enhancement system that requires P.R.E.P for proper adhesion. Light shine removal is needed using a 240-grit buffer or medium enhancement E-file bit.

P-Preform a manicure
R-Remove shine
E-Eliminate surface contaminants
P-Purify nail plate layers
3. Can **CND™ PLEXIGEL** be worn alone without color? Yes. When used as a complete system, **CND™ PLEXIGEL** can be worn alone for a clear enhancement. Finish the enhancement with **CND™ PLEXIGEL** Protector Top Coat for 3+ weeks wear.
4. When using **CND™ SHELLAC™** Gel Polish over **CND™ PLEXIGEL**, should the top film be removed prior to color application? If the enhancement doesn't require shaping or finishing, you can apply **CND™ SHELLAC™** Gel Polish directly over the top film of the gel.

*When used as directed.

Q&A

CND™ PLEXIGEL

QUESTION

ANSWER

5. Are two layers of **CND™ PLEXIGEL** Shaper needed?

Yes, we recommend two layers for best wear. Apply the first layer thinly (per the Custom Cure protocol) for optimal control of comfort and best adhesion and the second layer as needed for each client.

6. Can **CND™ SHELLAC™** Topcoat be used over **CND™ PLEXIGEL** instead of Protector Top Coat?

For clear enhancements, we recommend to finish using **CND™ PLEXIGEL** Protector Top Coat. If using **CND™ SHELLAC™** Gel Polish over **CND™ PLEXIGEL**, finish with **CND™ SHELLAC™** Original (or **DURAFORCE™**) Top Coat instead of Protector Top Coat.

7. Can nail art mediums (i.e. pigment, glitter, embellishments, etc.) be used with **CND™ PLEXIGEL**?

CND™ PLEXIGEL is the perfect base for art. We recommend applying a base enhancement layer of the **CND™ PLEXIGEL** system (Bonder, Shaper/Builder and Protector Top Coat) before applying art elements. This will protect the integrity of the enhancement during wear. To then add art elements as desired, including embedding and encasing embellishments or blending pigments and additives into **CND™ PLEXIGEL** on the top layer.

8. Is it possible to apply **CND™ PLEXIGEL** too thin?

Yes. If your client experiences cracking or chipping, you may be applying the gel too thin. Try applying an additional layer and ensure to seal the edge of all layers for best wear.

9. Could **CND™ SHELLAC™** Base Coat be used instead of **CND™ PLEXIGEL** Bonder?

No. To guarantee the longevity of a **CND™ PLEXIGEL** service, **CND™ PLEXIGEL** Bonder must be used to anchor the enhancement to the nail and act as an attraction layer during sculpting.

10. Can **CND™ PLEXIGEL** be cured in the **CND™** UV Lamp?

The **CND™** UV Lamp has a beautiful broad distribution of wave length and should do a good job, however since **CND™** no longer manufactures the UV Lamp, we did not test it with **CND™ PLEXIGEL**.

We recommend the **CND™** LED Lamp as top choice for proper curing. **CND™ PLEXIGEL** was calibrated to properly cure in both of our **CND™** LED lamps (closed and open units). If another lamp is used, it might lead to under or over curing and could impact the wear results of the product.

11. Can **CND™ PLEXIGEL** be properly cured with a mini hand-held LED light?

Mobile or mini LED lights have a wide range of light output, which makes it difficult to calibrate their effectiveness in proper curing with **CND™ PLEXIGEL**. We recommend using the **CND™** LED Lamp that is calibrated to work as a system together with the **CND™** Custom Cure protocol to ensure proper and comfortable cure.

12. Why do some clients experience heat when curing?

CND™ PLEXIGEL is a monomer-rich formula and some clients may experience heat sensitivity. Reference the **CND™** Custom Cure protocol.

13. What does flash cure do?

Flash Cure means to partially cure the gel for 2-3 'flashes' in the **CND™** LED Lamp for client comfort and product control. Using the **CND™** LED Lamp with button 1 for 2-3 pulses will reduce the output by 50%, which will control the heat sensation. Once the gel is applied to entire hand, cure for one minute using preset button 2B for complete cure.

Q&A

CND™ PLEXIGEL

QUESTION

ANSWER

1. What is the purpose of the large bottle neck?

The **CND™ PLEXIGEL** bottle was designed specifically for ease of use based on the individual viscosity of each product. The larger bottle neck accommodates the viscosity of the gel, making it easier to remove from the bottle and for portion control with each application.

2. What is the purpose of the two different brushes for **CND™ PLEXIGEL**?

The length of the brushes has been uniquely adapted to provide an easy application based on their viscosities. The **CND™ PLEXIGEL** Bonder & Builder feature a short, flat brush for precision placement. The Shaper & Protector Top Coat feature a long, full brush for flow and smooth application.

3. How many approximate services per bottle **CND™ PLEXIGEL**?

CND™ PLEXIGEL Bonder (0.5 fl. oz.) = 100 15 mL
CND™ PLEXIGEL Shaper (0.5 fl. oz.) = 30 15 mL
CND™ PLEXIGEL Builder (0.5 fl. oz.) = 20 15 mL
CND™ PLEXIGEL Protector (0.5 fl. oz.) = 80 15 mL

4. What is the suggested service price for a **CND™ PLEXIGEL** Enhancement service?

We recommend parity price or slightly higher to traditional gel enhancement offerings. The client receives value and a lower cost per week, since **CND™ PLEXIGEL** can wear for 3+ weeks.
